Limitations

(a non-exhaustive list)

- Limited memory.
- .spn files can contain only ASCII characters, no UNICODE.
- Minimal floating-point support: floating-point literals are supported, floating-point constant expressions are not.
- The following keywords are not implemented: FLOAT, ROUND, TRUNC, FILE, ORGX, \$.
- Sphinx is unable to optimize most long branches to short branches.
- Sphinx does not detect and remove objects that are duplicates at the bytecode level.
- The Sphinx file system supports only 8.3 filenames and has no directory support.
- Needs some sort of makefile or build system.
